

CASE STUDY | FIFA WORLD CUP SOUTH AFRICA 2010 STADIUMS

PROJECT: FIFA World Cup 2010 SA
CATEGORY: Project
DURATION: 4 Years
SIZE: Over 120 000 seats

In 2007 we won the bid to supply, manufacture and install spectator seating in three of the major 2010 FIFA World Cup Football stadiums in South Africa.

Together with our local and international partners we geared up for the tooling, manufacture and installation of over 120 000 general spectator and VIP seats at Cape Town Stadium, Mombela Stadium in Nelspruit and Ellis Park stadium in Johannesburg.

These projects were successfully completed well within the time frames provided and have conformed in every way to the stringent International quality and longevity requirements by FIFA, including 10 year guarantees and continuity of supply.

These stadiums continue to be a testimony to our ability and capacity as a company to efficiently execute projects of this nature.
